CAREER OBJECTIVE

Master's student in Computer Science at RPTU Kaiserslautern (graduating September 2027) with 3 years of professional experience in automation, data reporting, and application performance monitoring at Capgemini, plus current part-time operations leadership experience in Germany. Actively building agentic AI systems, LLM automation pipelines, and Android applications. Seeking a working student or internship role in AI/ML or software engineering.

EDUCATION

Master of Science in Computer Science , RPTU Kaiserslautern — Oct 2024 - Present
Bachelor of Engineering in Computer Engineering, University of Pune - 1.9 — 2017 - 2021

SKILLS

Languages	Python, SQL, Java
AI & ML	LangGraph, MCP, PyTorch, scikit-learn, QLoRA
Automation & Tools	n8n, Ansible, Docker, Power BI (DAX), AppDynamics, Git, Jira
Frameworks	Flask, Django
Mobile & XR	Android (Java, ARCore, OpenGL ES)
Languages Spoken	English (C2 - fluent) · German (B1 - actively developing)

EXPERIENCE

Deputy Shift Lead (Operations, Working Student) — March 2025 - Present
Flink — *Kaiserslautern, Germany*

- Oversee and maintain internal hub operations, inventory, and stock management, coordinating a rider and ops team of up to 10 across shifts of up to 8 hours, with a structured handover at the end of every shift.
- Manage KPI tracking and pre- and post-order feedback, resolving rider issues in real time to keep operations running smoothly at an average daily order volume of up to 280.

Senior Analyst / Software Engineer (Power BI Developer) — April 2023 - Sept 2024
Capgemini — *Pune, India*

- Awarded the **Customer Delight Award** for pitching and leading the transition from manual reporting to automated **Power BI** reports for weekly reporting, reducing manual data compilation effort by 4 hours per week.
- Integrated data sources and developed Power BI reports using **DAX** to deliver actionable insights and improve business decision-making. Leveraged LLMs to optimise queries for performance.
- Managed Power BI workspace access, report ownership, and refreshes while training team members on report maintenance and future enhancements.

Analyst / Software Engineer (Performance Management in Automation) Sept 2021 - March 2023
Capgemini *Pune, India*

- Created dashboards in **AppDynamics** for application health, business transaction performance metrics, and infrastructure metrics across multiple applications, enabling monitoring for L2/L3 teams.
- Added health rules and created policies for multiple applications in the AppDynamics controller, integrating them with Opsgenie alerts to enhance on-call support.
- Developed Python scripts to automate generation of health status dashboards, saving 2 hours of manual configuration per cycle, and enabled automated AppDynamics .NET agent deployments using Python and **Ansible**.
- Provided training sessions to support teams to enable them to leverage AppDynamics for monitoring and troubleshooting.

PROJECTS

- **Heterogeneous IT Systems – Adaptive LLM-Powered Browser Agent** *(Ongoing, 05/2026 - Present):* Engineering an adaptive LLM-powered browser agent using Python and Playwright to automate workflows across a leave management system, MS Calendar, and MS Teams.

  Implemented secure authentication and dynamic page-interaction logic that adapts to changing page structures across the target applications, along with failure-recovery handling so the agent can detect broken automation steps and retry or fall back gracefully.
- **MyDietTracker – AI-First Nutrition Tracking App** *(Ongoing, 07/2026 - Present):* Building an AI-First meal and nutrition tracker in Java. Features barcode and nutritional label scanning for tracking and building AI powered dynamic planning based on user activity and goals.

  Implemented on-device nutrition-label OCR (ML Kit) and barcode scanning (OpenFoodFacts API), a TDEE/calorie calculator (Mifflin-St Jeor / Katch-McArdle) with weight/macro tracking, recipe builder, and trend charts. GitHub
- **Automated Job Application Tracking Pipeline (n8n & AI):** Developed an automated n8n workflow that ingests unstructured emails, filters them, and uses an LLM to accurately extract job application status metrics (e.g. Interview, Offer, Rejection).

  Deployed an isolated global error-handling framework via an Error Trigger node, programming a Discord operations bot with JavaScript expressions to stream real-time formatted diagnostic reports. GitHub
- **LLM Fine-Tuning for Language Translation:** Fine-tuned the Qwen2.5-1.5B model for German-to-French translation using QLoRA, resulting in an 84% increase in BLEU Score.

  Focused on data cleaning, prompt engineering, and synthetic data generation for training to ensure high-quality model output. GitHub
